

Dimas Garcia Gutierrez - Finca Ecologica - Lot #2 - Pacas - Washed (GrainPro)

Dimas García Gutierrez started growing coffee on his farm, Finca Ecologica, as an alternative source of income after seeing that other coffee producers in the area were becoming successful in this way. He started planting the Pacas variety and now maintains a 3 manzana parcel near the town of Santa Rosa in El Salvador's Chalatenango region. With an average production of 30 quintales of coffee, Dimas has developed the following technique for processing his crop:

Coffee is harvested when fully ripe and depulped with a manual beneficio. It is then set to dry-ferment for a period of 7-24 hours before it is fully washed and moved to a patio for drying. The final drying process takes an average of 8-18 days, weather depending, and the coffee is moved consistently to promote uniform moisture content throughout.

For more information of Salvadorian coffee, visit our [El Salvador](#) origin page.

ID# 9609

Origin	El Salvador
Region	Chalatenango
Farm	Finca Ecologica
Variety	Pacas
Altitude	1500 masl
Proc. Method	Washed
