

Grade 2 - Halo Beriti

Halo Beriti Washing Station was established in 2014 and serves 750 smallholder producers, who deliver their coffee in cherry form. This particular lot is part of a "special preparation" in which hand-sorting was done repeatedly throughout the receiving and drying process, ensuring that only perfect coffees made it into the bags.

Coffees in Ethiopia are typically traceable to the washing station level, where smallholder farmers—many of whom own less than 1/2 hectare of land, and as little as 1/8 hectare on average—deliver cherry by weight to receive payment at a market rate. The coffee is sorted and processed into lots without retaining information about whose coffee harvest is in which bag or which lot.

For more information about coffee production in Ethiopia, visit our [Ethiopia page](#).

ID# 17973

Origin	Ethiopia
Region	Gedeb, Yirgacheffe
	About 750
Farm	smallholder farmers delivering to Halo Beriti washing station
Variety	Heirloom Ethiopian varieties
Altitude	2100–2300 masl
Proc. Method	Natural

The Cup

" Sweet and tart with floral, citrus and praline flavors."
