

Sugarcane E.A.

This decaf comes from the Planadas area of the department Tolima in Colombia. The lot is a collaborative effort of multiple producers in Planadas that make up the association Agprocem. Agprocem has 61 families comprising the association and between them the families produce Caturra, Castillo and Typica varieties mainly. The altitude of the family farms are between 1700 and 2000 masl. The coffees from each farm collaborating on this lot were all processed using the washed method then sun-dried before being sent for decaffeination.

ID# 9571

Origin Colombia

Take advantage of a great program dedicated to bringing the highest quality, naturally processed decaf to market! Origin Select Decafs are sourced green by Café Imports prior to decaffeination, breaking from the industry norm. By doing this, we are able to provide the highest quality water and E.A. (sugar cane) processed products available. Offerings with the "Farm Select Decaf" name go one step further: We have carefully chosen microlots to be decaffeinated, in order to offer an even higher-end line of traceable options.

For many years, Colombia was the number-one world producer of washed coffees,

and the second-largest producer to Brazil. In 2000, Colombia was surpassed by Vietnam, and then the rust infestation of 2008 set them back significantly. Today they are currently in the top five of coffee production with roughly 10 million bags per year. Colombians farmers and citizens alike drink a lot of coffee every day; nearly 20% of their annual production.
