

# Wolichu Wachu - Grade 1

The Wolichu Wachu washing station was founded in 2017 and serves 4,500 local smallholder producers in and around the town of Haro Wachu, in the Urga district of Guhi in the Oromia region of Ethiopia. The average producer here farms on half a hectare of land, and delivers coffee in cherry form to the washing station, where it is processed as necessary.

Washed lots like this one are sorted in cherry upon delivery, then depulped and fermented underwater for 48–72 hours. The coffee is then washed and given an additional soak for 8–16 hours before being spread on raised beds to dry for 9–12 days, on average.

According to the washing station manager, 90 percent of the coffee delivered to the factory is Bourbon, and 10 percent is Typica: While these are two varieties better-known in Central and South America, the same terms are used colloquially in Ethiopia to describe certain coffee-berry-disease-resistant cultivars. The Ethiopian "Bourbon" and "Typica" varieties are typically genetically removed from the ones found elsewhere around the world.

For more information about coffee production in Ethiopia, visit our

ID# 13708

Origin	Ethiopia
Region	Haro Wachu, Uraga, Guji
Farm	Various smallholder producers delivering to Wolichu Wachu washing station
Variety	Bourbon, Typica
Altitude	2100–2300 masl
Proc. Method	Washed
Harvest Schedule	October–February

## The Cup

"Balanced and sweet with lots of tart acidity and a smooth mouthfeel; big floral flavor with toffee, hazelnut and citrus fruit flavors."
